

## ATV FIT LAW—ONE SIZE DOES NOT FIT ALL!

To operate an ATV on public lands or frozen waters, or on state or grant-in-aid trails, operators under age 16 must:

- Be able to properly reach and control the handlebars and reach the foot pegs while sitting upright on an ATV with straddle-style seating.
- Be able to properly reach the steering wheel and foot controls of a Class 1 ATV with side-by-side seating while sitting upright with the seat belt fully engaged.

**Seat clearance:** There should be a minimum of 3 inches between operator and the ATV seat. Proper clearance enables the operator to maintain balance on the foot rests when riding over rough terrain. Maintaining balance prevents the operator from falling off or being thrown from the machine.

**Upper legs:** While seated, the operator's upper legs should be horizontal (parallel to the ground).

**Arm length:** While seated on the machine and gripping the handle bar, there should be a distinct bend in the arm at the elbow. Without it, there will not be sufficient reach to properly grip the handlebars when turning and riding.

**Hand size:** With the hand gripping the handle bar, extend the fingers to the brake lever. The first joint of the index finger should extend beyond the brake lever. If it doesn't, then the hand is too small to safely operate the brake. Also, check to see that the arm length is sufficient to properly operate the brake lever and throttle while the handlebars are turned to the far left and right.
