

# How We Get Corn Starch

Farmer selects seed to produce the best product.

Seed is planted in the spring (April or May).

Corn matures in the field.

Corn is harvested from the plant in the fall (October).

Starch is packaged.

Starch is made as a by-product of corn.

Corn is transported to processing plant.

Starch arrives at the grocery store.

Consumer purchases starch to store in pantry, until ready to use in a variety of food dishes
