Creating Connections Through Cohesive Wellness - HVAC Upgrades #WellnessWednesday

With COVID-19 and now the local wild fires, air quality is on everyone's minds lately. It will continue to be a topic of conversation for indoor events. HVAC (heating, ventilation and air conditioning) systems play a large role in our [Safe Re-Opening Plan](#). While these systems are routinely maintained, additional monitoring of the indoor air quality will occur and the use of outdoor air will be increased as guided by industry standards.

Lynnwood Convention Center is making the following air quality improvements:

- Increasing air flow to allow an extra 25% of air in throughout the day
- Upgrading all HVAC air filters with higher efficiency MERV13 filters
- Full exhaust/exchange of interior air twice a day

We know that planning a meeting right now can be stressful so we want to ensure you can breathe easy about creating a safe event at the Lynnwood Convention Center.
