

## Improvements to the 2022 JAM Show

**Classification** - Please review revised (NDC R22) Naming, Describing and Classification document found on [jamshow.org](http://jamshow.org) for information regarding classes and changes made in Classification. As in the past, projects pulled on the highway will require DOT inspection regardless of what class they are entered in.

As explained in NDC R22, project that classifiers identify as not allowed – including all wood projects - will be prohibited from unloading and entering barns.

### **2022 ASABE monthly Library Access codes**

Instructions on how to access the Technical Library is provided under Additional Links on this [jamshow.org](http://jamshow.org) web site. Students can download standards from home. Standards are found in the Technical Library on the ASABE Web site.

**ASABE 2021 codes for JAM 2022** - Guest monthly codes to access Tractor 3 point Hitch and PTO standards. When prompted for user name – (enter word next to appropriate month below.

Password is **2021**.)

#### **Monthly Access**

July	<b>smart</b>
August	<b>cloud</b>
September	<b>wheat</b>
October	<b>biomass</b>
November	<b>peanut</b>
December	<b>energy</b>

(There are no codes for Jan – Feb, 2022)

**IMPORTANT** - Codes are supplied this year for 2022 JAM. Students should access them early to use in the initial project **design** or tractor repair/restoration. Please do not email or call ASABE for copies of Standards.

**The primary purpose of requiring Standards is for students to learn how to use a professional research library to obtain engineering specifications to use in the design of their project that attaches to a tractor or a recondition/repared tractor. It is not for just adding materials to notebook.**

Tractor standards are applicable for new and older tractors. Standard should be referenced when designing machinery that will attach to tractors with three point

hitch and or PTO. Make sure that the latest standard is placed in the Research section of the Documentation package.

**Divisions 14 and 15 - Tractor Classes** Please refer to the Premium List provided on the San Antonio Livestock Show and Rodeo WEB site in the Fall for specific rules and information

- We will award scholarships and prizes to winners in both Divisions just as we do for winners in all Divisions of the project show.
- Class 1502 -**Repair and Reconditioning** puts more emphasis on diagnosing and repair instead of authenticity and aesthetics. Tractors in this class **may or may not** be completely restored including body work and painting. Tractor models in this class encompasses 1961 to present 2021..
- No changes to Notebook will be allowed after tractors are unloaded Friday morning.
- JAM requires that all lugged tractors have road bands. These bands may be shop built – see picture of 1929 John Deere D on front page of WEB.
- Crawlers will need rubber lugs or exhibitor must provide rubber belts/mats (used round baler belts may be used) to drive on when bringing crawler/lugged tractor into the barn.

## Reminders

- CLASSES AND DIVISIONS - Classes and Divisions have not changed from 2021 JAM
- PREMIUM LIST - Please refer to the JAM Premium List for specific rules and instructions.
- NDC R22 - Please use NDC Revised 2022 –. NAMING, DESCRIBING, and CLASSIFICATION of PROJECTS document. This document will help you properly name your project so it can be printed on the Show Entry Card. NDC will help you enter project in the proper class. It also identifies those projects that are not eligible to be shown at JAM. Properly naming, classifying document along with Entry Data including names of exhibitor are considered in Showmanship Criteria.
- MARKET PLACE - JAM Project Show presentations differ from the Market Place Show – To prevent confusion do not put For Sale signs on JAM projects.
- PROJECT MEASUREMENTS - JAM is asking that you provide approximate measurements Width, Length and Height to nearest foot when you enter your projects. Gates and Panels will need only length and height. Please be realistic of the project size. This will not reserve project space, only help define space needed when placing in barn. Providing this information is considered in Showmanship Criteria.

- PROJECT PLACEMENT - JAM will prepare two barn placement maps – one for good weather & one for inclement weather. In Good Weather – some classes may be shown outside. (Classes will remain together)
- PROJECTS NOT ALLOWED The JAM show at San Antonio has no classes for knives, canoes and fishing rods, glass topped tables, leather goods, projects built from kits or all wood projects. Note: This is NOT a complete list of all projects that cannot be exhibited. Please refer to the NDC and get on the San Antonio Livestock Show and Rodeo's WEB page to review the JAM premium list when it is posted in the Fall.
- TRAILERS (DOT) No Agriculture Exemptions allowed
  1. Over wide trailers continue to be a problem. Max width measured from widest metal to metal on trailer is 102 inches.
  2. Getting an overwide permit – Permit must be good for one week prior to and one week after JAM Show. Over wide trailers with no permit are automatically Red Ribbon. Over wide trailers even with permits are discouraged.
  3. Trailers may receive Blue Ribbons with some minor DOT infractions.
  4. VIN are required on all trailers – see premium list. These numbers do not have to coincide with what is on the registration but it is best if they are.
  5. All trailers must have a license tag – may be a farm tag.
