FOREWORD

Industrial Education is an integral part of the total program of education in the public schools of California. The branches of learning represented by industrial education are industrial arts education, and vocational trade and technical. Industrial arts education provides for personal identification with the work of industry, for satisfactions that are found in creative craftsmanship, and for developing values which are important to the consumers of goods and services. Vocational trade and technical education develop occupational competencies that prepare people to enter employment in specific industrial and service occupations, or to advance to a higher level of employment.

Staff members of the Bureau of Industrial Education, California State Department of Education; members of the professional organization, California Industrial Education Association; and teachers in the field of industrial education in the local schools recognize that student craftsmanship, design and creativeness are further stimulated by displays and awards programs at fairs.
